DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group II, claim 4 in the reply filed on 1/13/09 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 1 contains the trademark/trade name KETJEN®. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe carbon black and, accordingly, the identification/description is indefinite.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2002-25571. Saito et al (US 2003/0031912) is taken as an English equivalent of JP '571 herein.

Saito et al '912 teaches a fuel cell separator comprising 100 weight parts of carbon particles such as graphite or carbon black, 10-50 weight parts of a thermoplastic resin such as ethylene-vinyl acetate copolymer, and 0-10 weight parts of a carbon fiber or glass fiber (see [0030], [0034], [0037]).

Saito et al. do not teach an embodiment of the invention that is anticipatory of claim 1, i.e., a separator having a resin content of 14-20 wt%, a carbon particle content of 70-83.5 wt%, and a glass/carbon fiber content of 2.5-10 wt%.

However, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because the claimed ranges overlap with the ranges disclosed by Saito et al. In the case where the claimed ranges overlap or lie inside ranges disclosed by the prior art, a prima facie case of obviousness exists (*In re Wertheim*, 191 USPQ 90; *In re Woodruff*, 16 USPQ2d 1934). As an example, if the ratio of resin: carbon particles:

fiber (in weight parts) of Saito et al. is 20: 100: 5, this would result in a weight percentage ratio of 16: 80: 4, which falls within the claimed ranges.
